Education

Indian Institute of Information Technology, Sri City Bachelor of Technology (B.Tech) – Computer Science and Engineering (AI/ML Specialization)	2023 – 2027 CGPA: 7.66
Narayana Junior College, Vellanki Intermediate	2021 – 2023 Score: 953 / 1000
The Sun School, Vizianagaram Secondary Education (Class X)	Score: 93.2%

Technical Skills

Programming: C, Python, Java, JavaScript (Node.js), SQL
Backend & Systems: REST APIs, Express.js, Object-Oriented Programming, System Design
Databases: MongoDB, Relational Databases (SQL)
Cloud & DevOps: AWS, Docker, Cloud Deployment
Frontend: React, Redux
AI / ML: Machine Learning, Model Training, Model Inference
Foundations: Data Structures and Algorithms, Problem Solving

Projects

Cloud-Integrated Churn Prediction System

Python, AWS, Docker, REST APIs, Streamlit

- Designed and deployed an end-to-end **cloud-based, scalable prediction service** for customer churn with a user-facing interface for real-time inference.
- Built a production-ready ML pipeline covering data preprocessing, model training (Random Forest), and inference, containerized using **Docker** and deployed on **AWS**.
- Implemented a **self-learning retraining mechanism** where newly injected user data is periodically incorporated to improve model performance over time.
- Architected the system to support **scalable inference and model updates** by separating training and prediction workflows to ensure reliability under increasing usage.

SkillLink – Full Stack Web Application

React, Redux, Node.js, Express.js, MongoDB, REST APIs

- Designed and implemented a **full-stack, multi-user platform** supporting **4 distinct user roles** with role-based workflows.
- Built and maintained **10+ backend REST APIs** handling authentication, service booking, product listings, order management, and core business logic.
- Developed a scalable **React + Redux frontend** with global state management and seamless backend integration.

IoT-Based Smart Irrigation System (TinyML)

ESP32, Raspberry Pi, TinyML, Blynk Cloud

- Developed a smart irrigation system using **TinyML on ESP32** integrated with Raspberry Pi for low-latency, on-device decision making.
- Enabled **cloud-based monitoring and control** through Blynk for real-time device-to-cloud communication.

Positions of Responsibility

NSS Volunteer

Participated in community service initiatives and social outreach activities during the first year.

Abhisarga 2024 – Stalls Team Member

Assisted in coordinating stall operations and managing logistics during the institute cultural fest.

Achievements

- Qualified internal college round of **Smart India Hackathon (SIH)**.
- Participated in **Flipkart GRID 7.0** software engineering challenge.
